

STANDARD WIRING DIAGRAM

This is a typical wiring diagram that shows how we would expect an MHUB 4K (8x6+2) to be cabled. This diagram features eight HDMI source devices (any combination of source devices) being sent to eight rooms. 6 of the displays are located upto 70m away (40m if 4K is required) with an additional two rooms on a short HDMI run. All devices are being controlled via backwards IR.
