

Huddle Room Technology (HRT) designs and develops products to support team collaboration and communication inside and outside huddle rooms. HRT markets its technology all over the world and has operational and commercial offices in Italy and in the United States.

Huddle Hub: an innovative and user-friendly Wireless Presentation System

Huddle Hub allows the screen of your computer and mobile device to be presented to the room display or projector, eliminating the need for HDMI cables or dedicated dongles.

Receive the presentation on devices and Smart TVs:

With Huddle Hub you can receive a presentation directly on the screen of the participants' personal devices (laptops, tablets, smartphones) making it simple to see contents even when far from the main display, or even when there is no display at all. Every space in your company becomes a meeting space: huddle rooms, offices, even lounges.

UC/VC software integration for Multi-site presentations:

With Huddle Hub, wireless presentations can also extend to different rooms within the company, or with branch offices (multi-site feature). Combine Huddle Hub One with a third-party UC/VC software: connect the meeting room USB webcam to the hub, and wirelessly send the signal to the laptop doing the videoconference. No more need for a dedicated PC in the meeting room, just bring your laptop and keep the table free of cables.

Multi-room: 1 Huddle Hub One, 4 concurrent Wireless Presentations

A single Huddle Hub One/One+ unit hosts up to 4 independent sessions at the same time:

Ethernet
Up to 4
concurrent Rooms

**huddle hub
